

PRESS RELEASE

Armenian Helicopters makes strategic investment in DRON to expand aerial solutions for industrial and infrastructure customers

Yerevan, Armenia | April 7, 2026

DRON LLC and Armenian Helicopters LLC jointly announce that Armenian Helicopters has made a strategic investment in DRON as part of a broader partnership to develop integrated aerial solutions.

This supports cooperation in areas where unmanned and manned aviation capabilities are complementary. The collaboration between the two companies provides industrial and infrastructure customers with a comprehensive and adaptable range of aerial services, encompassing inspection, imaging, data acquisition, infrastructure support and a selection of special mission requirements.

By combining the capabilities of both drone and helicopter-based systems, the companies are able to offer their customers a wider range of mission profiles and enhance their ability to support operations across complex and diverse environments.

Both companies confirm that safety, regulatory compliance and disciplined operational governance remain fundamental to their respective activities. Each company conducts its operations within the framework of applicable aviation regulations, operational approvals and company-specific safety and risk-management processes.

The transaction does not affect the independent responsibility of each company for its own operations, personnel, certifications, maintenance, safety oversight, contractual obligations or regulatory compliance and each company will continue to operate under its own management and control.

About Armenian Helicopters LLC

Armenian Helicopters is Armenia's only certified commercial helicopter operator, holding an Air Operator Certificate (AOC № 067) issued by the Civil Aviation Committee of the Republic of Armenia. The company is approved under EASA-aligned regulatory standards across Part-CAT (commercial air transport), Part-SPO (specialised operations), Part-CAMO (continuing airworthiness management) and Part-145 (aircraft maintenance), operating a fleet of Airbus H125 (AS350 B3e) and Robinson R66 Turbine helicopters from its base at Jrvezh Helipad, Yerevan. Armenian Helicopters serves government, industrial and corporate customers across sectors including mining, energy, infrastructure, media production and emergency services, providing passenger transport, aerial work, inspection, filming support and special mission operations throughout Armenia and the wider region.
